unix-privesc-check v1.4 ( http://pentestmonkey.net/tools/unix-privesc-check )  
Usage: unix-privesc-check { standard | detailed }  
  
"standard" mode: Speed-optimised check of lots of security settings.  
  
"detailed" mode: Same as standard mode, but also checks perms of open file  
handles and called files (e.g. parsed from shell scripts,  
linked .so files). This mode is slow and prone to false  
positives but might help you find more subtle flaws in 3rd  
party programs.  
  
This script checks file permissions and other settings that could allow  
local users to escalate privileges.  
  
Use of this script is only permitted on systems which you have been granted  
legal permission to perform a security assessment of. Apart from this  
condition the GPL v2 applies.  
  
Search the output for the word 'WARNING'. If you don't see it then this  
script didn't find any problems.
